**HPI**

Very pleasant 77-year-old diabetic male new patient today self-referral here for evaluation of wound to right hallux plantar surface. He states this has been present for the last 5 years started from a callus and became a wound. He has been largely treating this himself he did see a wound care provider about a year ago which gave him a topical antibiotic ointment he states no other treatment was received. Current A1c 7.8.

Follow-up to the above-mentioned he did well with the dressing change protocol as well as the offloading the cam boot. Ready for skin grafting today

Here today follow-up to the above-mentioned he does have some maceration on the wound today there was a slight break to the dressing change protocol his wife passed away this week he has understandably had a lot going on.

Follow-up back from his wife's funeral doing well he is understandably dealing with a lot right now we can start seeing him twice a week for skin grafting plus dressing change. He had a fall last week and seems poor candidate for the cam boot at this time.

Here today follow-up to the above dressing change today we are seeing him twice weekly for skin graft and dressing changes. Doing well with the postop shoe.

Doing well follow-up to the above-mentioned he does have some periwound maceration today but this has improved from previous.

**HUDSON, Michael (id #28069, dob: 02/27/1948)**

Here today for continued care of right hallux wound. Small amount of hyperkeratosis periwound today he has been compliant with the modified postop shoe and dressing change.

Here today follow-up with above-mentioned dressing change he mentioned his aversion to vascular procedure at previous visit I think it is time we convince him to get this done.

Here today for continued skin grafting stable from previous

**ROS**

Patient reports no soft tissue swelling, no joint swelling, moves all extremities well, no previous injuries, and no trauma. **Back pain.** He reports no significant weight change, good appetite, no fever, normal activity level, no fatigue, and no acute distress. He reports no pain, no blurry vision, no redness, no itchiness, no swelling, no discharge, and normal movement. He reports no ear pain, no ear discharge, no hearing loss, no sinus pressure, no drooling, no facial swelling, no congestion, no sore throat, no hoarseness, and no mouth lesions. He reports no chest pain and normal heart rate. He reports no cough, no wheezing, no chest tightness, no pain with respiration, and normal respiration. He reports no difficulty swallowing, no abdominal pain, no nausea, no vomiting, no diarrhea, no constipation, no blood in stool, and no mucous in stool. He reports no discharge, no blood in urine, no pain with urination, no increase in frequency of urination, no voiding urgency, no testicular pain, no swelling, no redness, no itching, and no masses. He reports no pain, no itchiness, no skin dryness, no flaking, no redness, no rash, no hives, no skin lesions, no skin lumps, no swelling, no bruising, and no insect bites. He reports no numbness, no weakness, no tingling, no burning, no shooting pain, no headache, no dizziness, and no loss of consciousness. He reports normal drinking and no temperature intolerance. He reports no sneezing, no runny nose, no sinus pressure, and no post-nasal drip.

**Physical Exam**

**Constitutional:** General Appearance: well-developed. Level of Distress: NAD.

**HPI**

Very pleasant 77-year-old diabetic male new patient today self-referral here for evaluation of wound to right hallux plantar surface. He states this has been present for the last 5 years started from a callus and became a wound. He has been largely treating this himself he did see a wound care provider about a year ago which gave him a topical antibiotic ointment he states no other treatment was received. Current A1c 7.8.

Follow-up to the above-mentioned he did well with the dressing change protocol as well as the offloading the cam boot. Ready for skin grafting today

Here today follow-up to the above-mentioned he does have some maceration on the wound today there was a slight break to the dressing change protocol his wife passed away this week he has understandably had a lot going on.

Follow-up back from his wife's funeral doing well he is understandably dealing with a lot right now we can start seeing him twice a week for skin grafting plus dressing change. He had a fall last week and seems poor candidate for the cam boot at this time.

Here today follow-up to the above dressing change today we are seeing him twice weekly for skin graft and dressing changes. Doing well with the postop shoe.

Doing well follow-up to the above-mentioned he does have some periwound maceration today but this has improved from previous.

**ROS**

Patient reports no soft tissue swelling, no joint swelling, moves all extremities well, no previous injuries, and no trauma. **Back pain.** He reports no significant weight change, good appetite, no fever, normal activity level, no fatigue, and no acute distress. He reports no pain, no blurry vision, no redness, no itchiness, no swelling, no discharge, and normal movement. He reports no ear pain, no ear discharge, no hearing loss, no sinus pressure, no drooling, no facial swelling, no congestion, no sore throat, no hoarseness, and no mouth lesions. He reports no chest pain and normal heart rate. He reports no cough, no wheezing, no chest tightness, no pain with respiration, and normal respiration. He reports no difficulty swallowing, no abdominal pain, no nausea, no vomiting, no diarrhea, no constipation, no blood in stool, and no mucous in stool. He reports no discharge, no blood in urine, no pain with urination, no increase in frequency of urination, no voiding urgency, no testicular pain, no swelling, no redness, no itching, and no masses. He reports no pain, no itchiness, no skin dryness, no flaking, no redness, no rash, no hives, no skin lesions, no skin lumps, no swelling, no bruising, and no insect bites. He reports no numbness, no weakness, no tingling, no burning, no shooting pain, no headache, no dizziness, and no loss of consciousness. He reports normal drinking and no temperature intolerance. He reports no sneezing, no runny nose, no sinus pressure, and no post-nasal drip.

**Physical Exam**

**Constitutional:** General Appearance: well-developed. Level of Distress: NAD.

**Cardiovascular:** Arterial Pulses Right: **dorsalis pedis diminished** and **posterior tibialis diminished**. Arterial Pulses Left: **dorsalis pedis diminished** and **posterior tibialis diminished**. Varicosities Right: **varicosities**. Varicosities Left: **varicosities**.

**Integumentary:** Foot Right: **dry** and **atrophic**. Foot Left: **dry** and **atrophic**. Great Toe Nail Right: **pain with and without pressure**. Great Toe Nail Left: **pain with and without pressure**.
